

# Popcorn Making Guide

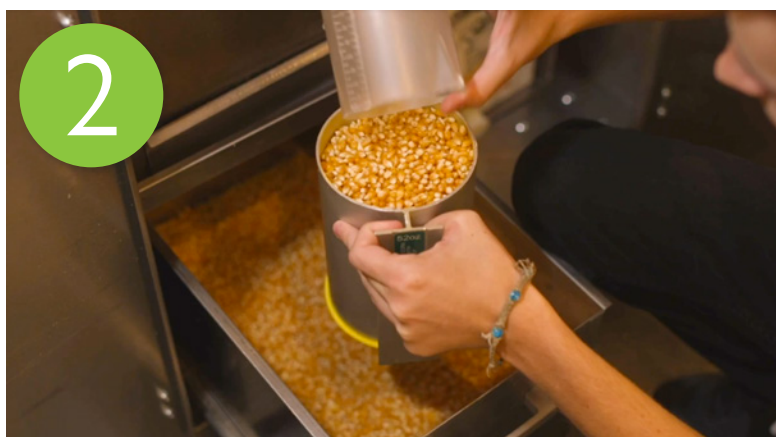

Popcorn is a crucial concession item offered at the theater, and it's important that you never let it run out or burn.

## CHEAT SHEET

**Turn on the kettle heat and kettle motor**

Also turn on popper shelf heat if applicable.

**Fill your popcorn scooper to the brim with seeds**

Then measure and pour the appropriate amount of seasoning salt on top of the seeds.

**When the machine beeps, it means the kettle is fully heated**

Pour the seeds into the kettle and press the oil button. Some machines also have an oil master button that also needs to be turned on.

## Wait for the popcorn to pop

This will take a few minutes.

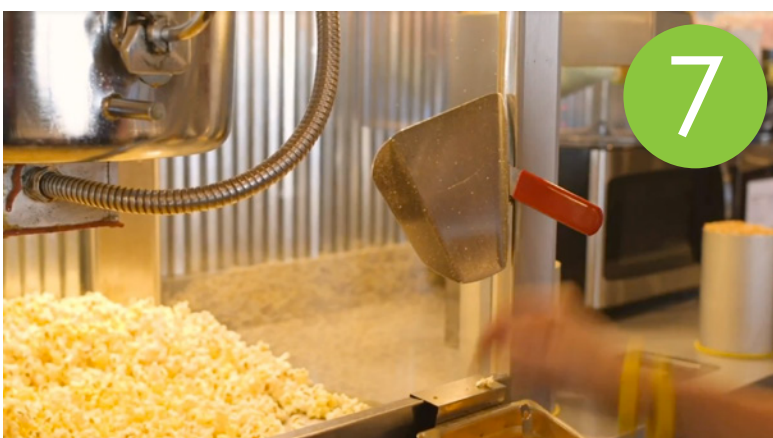

## When the popping begins to slow down, dump the kettle

This will take a few minutes. Be sure not to let the popcorn cook too long and burn!

## Use the sifter to sift the popcorn

This will remove small crumbs from your popcorn.

## Put the sifter and scooper back in their respective places

If you're done making popcorn for the time being, turn off the machine.
